CHAIRMAN: Dick Grimshaw, OBE

PRESIDENT: Dr Dale Rachmeler

Director: Mr James Smyle

Director: Dr Sumet Tantivejkul

Director: Mr Roley Noffke

Director: Dr Paul Truong

Associate Director: Mr Joachim Boehnert

Latin America Coordinator: Prof. Oscar Rodriguez

Pacific Rim Coordinator: Dr Narong Chomchalow

Chile Coordinator: Ms Carolina Rivas

Costa Rica Coordinator: Ms Yorleny Cruz

BRIEF INTRODUCTION

• The Vetiver Network International is a volunteer and nonprofit NGO, which promotes the worldwide use of the Vetiver System for a sustainable environment particularly in relation to land and water.

• The Vetiver System a concept integrating simple scientific principles of hydrology, soil mechanics, and similar natural processes to manage soil and water on a landscape scale. • The concept excels when implemented using clones of a remarkable domesticated plant – vetiver (*Chrysopogon zizanioides*), a non fertile, noninvasive Indian clump grass cultivated for centuries for essential oil.

• The VS provides significant economic, environmental and social benefits. VS is now used in most tropical and semi-tropical countries, north to Italy and south to Chile.

• VS Technology is based on research and demonstrations through TVNI "partners," including research institutions, development agencies, NGO's and the private sector. VS has expanded from a technology primarily for farm soil and water conservation to include major applications for:

- Slope stabilization of public infrastructure: roads, railways, canals, rivers, construction sites;
- Prevention and treatment of contaminated domestic and industrial waste water;
- Reclamation of toxic mine-tailings and polluted industrial land;
- Disaster mitigation (e.g., stabilizing potential landslide sites, dikes and levees, dampening wind scour, and area protection against flooding);
- Soil improvement, wetland and marginal land restoration, and crop pest control;
- Renewable natural fiber for handicraft.
