

THE VETIVER PONTOONS

WHAT ARE THEY FOR?

- To absorb excess Nitrogen and Phosphorus in the water
- Clean “blue green algae” to regulate oxygen for the fish and other aquatic life in the pond
- For fish to feed on the roots of the grass
- To propagate

PHILEX MINING CORPORATION
Padcal, Benguet

Did you know that Vetiver pontoons can prevent fish kill by regulating the biological oxygen demand (bod) in fish ponds?

ANVAYA COVE GOLF COURSE
Ayala Land Incorporated

Vetiver pontoons can produce 800 to 1000 pieces of planting slips in 3 months
